

Gevo to Participate in Upcoming Virtual Investor Meetings

February 8, 2024

ENGLEWOOD, Colo., Feb. 08, 2024 (GLOBE NEWSWIRE) -- Gevo, Inc. (NASDAQ: GEVO), announced today that it will participate in the following upcoming virtual investor meetings:

- Water Tower Research Fireside Chat on Friday, February 16, at 10:00 am ET
- Renmark Virtual Non-Deal Roadshow series on Friday, February 23, at 10:00 am ET

Topics will include commentary on Gevo's recent business update, previously announced on January 24th, 2024 ([Linked Here](#)), and answering frequently asked questions.

Investors and other persons interested in participating in the event must register using the link below. Please note that the live event may be accessed at any time for replay after the presentation ends utilizing the same registration link.

About Gevo

Gevo's mission is to transform renewable energy and carbon into energy-dense liquid hydrocarbons. These liquid hydrocarbons can be used for drop-in transportation fuels such as gasoline, jet fuel and diesel fuel, that when burned have potential to yield net-zero greenhouse gas emissions when measured across the full life cycle of the products. Gevo uses low-carbon renewable resource-based carbohydrates as raw materials, and is in an advanced state of developing renewable electricity and renewable natural gas for use in production processes, resulting in low-carbon fuels with substantially reduced carbon intensity (the level of greenhouse gas emissions compared to standard petroleum fossil-based fuels across their life cycle). Gevo's products perform as well or better than traditional fossil-based fuels in infrastructure and engines, but with substantially reduced greenhouse gas emissions. In addition to addressing the problems of fuels, Gevo's technology also enables certain plastics, such as polyester, to be made with more sustainable ingredients. Gevo's ability to penetrate the growing low-carbon fuels market depends on the price of oil and the value of abating carbon emissions that would otherwise increase greenhouse gas emissions. Gevo believes that its proven, patented technology enabling the use of a variety of low-carbon sustainable feedstocks to produce price-competitive low-carbon products such as gasoline components, jet fuel and diesel fuel yields the potential to generate project and corporate returns that justify the build-out of a multi-billion-dollar business.

Gevo believes that the Argonne National Laboratory GREET model is the best available standard of scientific-based measurement for life cycle inventory or LCI.
